

Rope Grab RGA12

Product information

The RGA12 is designed to provide vertical fall protection to operatives ascending/descending a ladder or structure. Designed for use with 11 mm kernmantle rope, it connects directly to the chest attachment point of a compatible harness via a karabiner to keep the user close to the structure.

Best used for:

- Vertical access on ladders and structures using 11 mm kernmantle rope.
- Applications requiring close positioning to minimise fall distance during a slip.

Product benefits:

- Steel construction provides a durable and lightweight rope grab.
- Safety lock supports secure operation during vertical access.
- Chest-level connection helps minimise fall distance and anchor loading.
- Designed specifically for use with 11 mm kernmantle rope.
